

Quick Guide

Gateway Installation

1. Choose a suitable location for the Gateway, e.g. living room.
2. Connect internet cable from your router to one of the ports on the Gateway, as shown below.
3. Plug the DC adaptor to the Gateway to power on.

4. Wait until the Internet LED on the gateway turns green (this may take some time).

Quick Guide

Register the Gateway via PC

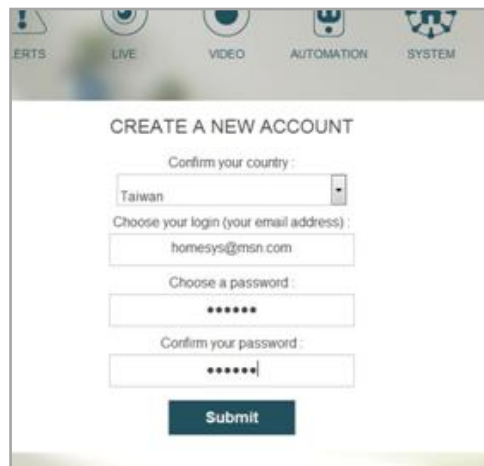

Create a new account

1. Click on “Create a new account”

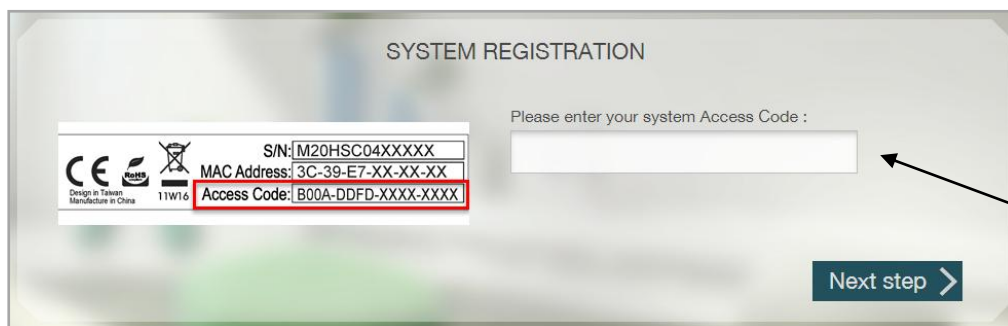

Create a new account

2. Enter the required information and click “Submit”.

3. Enter the Access code. It is printed on the label at the back of the Gateway. Click “Next step” when finished.

Quick Guide

4. The system will now test if the gateway is connected to the server.

The system may upgrade the Gateway software, **do not unplug the power or internet connection.**

(If you did not see step 4, please press small “Restart” button to restart your gateway.)

5. Click “Terminate” when the test is complete. The Gateway is now ready for use.
